

ScriptingListener

The ScriptingListener plug-in is used when creating action manager-based scripts. You should only install this plug-in when creating such scripts. See section “3.17 Action Manager scripting” in the PS 7.0 Scripting Guide.pdf for more information.

File references recorded by the JavaScript ScriptingListener are incorrect and will cause runtime error when the JavaScript code is executed. See the “JavaScript File Object.pdf” documentation for information on how to correctly specify file references in JavaScript.
